ABSTRACT:

PROBLEM TO BE SOLVED: To prevent lack of data elements contained in an object in moving or copying the object between repositories having different schemas.

SOLUTION: A repository comprises a schema storage part storing the schema of an object managed by this repository; an in-schema element storage part storing, among data elements of the object, data elements belonging to the schema; an out-schema element storage part storing, among the data elements of the object, data elements not belonging to the schema as out-schema elements; and an object input processing part storing each data element belonging to the schema, among data elements of an object inputted from another repository, in the in-schema element storage part, and storing each data element not belonging to the schema as an out-schema element in the out-schema element storage part.
